

Tessaline Building Products

Annual and Sustainability Report 2024/25

For the year ended 31 March 2025

Fictional sample document. Created by Veridion for demonstration and testing. The company, people, sites and figures are invented and do not describe any real organization.

About this report

Tessaline manufactures roof tiles, facing bricks and landscaping products from six plants. This report covers the financial year 1 April 2024 to 31 March 2025 (FY2024/25). Production was 361,000 tonnes.

We report greenhouse gas emissions using the financial control approach, in line with the GHG Protocol Corporate Standard. Emission factors are taken from DESNZ (2024) and global warming potentials from the IPCC Fifth Assessment Report (AR5). The inventory covers CO₂, CH₄, N₂O and HFCs.

Our base year is FY2019/20. Base-year emissions are recalculated for structural changes above 5%.

Scope 1 and Scope 2 emissions for FY2024/25 received limited assurance from an independent assurance provider under ISAE 3410.

Climate performance

Greenhouse gas emissions (tCO2e)

Indicator	FY2024/25	FY2023/24
Scope 1 emissions (tCO2e)	41,870	43,050
Scope 2 emissions – location-based (tCO2e)	17,620	18,410
Scope 2 emissions – market-based (tCO2e)	9,410	12,880
Scope 3 emissions (tCO2e)	186,300	191,700
GHG intensity – Scope 1 and 2, location-based (tCO2e per tonne of product)	0.165	0.171

Scope 3 covers Category 1 (purchased goods and services), Category 4 (upstream transportation and distribution) and Category 12 (end-of-life treatment of sold products), calculated using a combination of spend-based and activity-based methods.

Biogenic CO2 emissions from the use of biomass fuels were 1,240 tCO2e in FY2024/25 and are reported outside the scopes.

Energy and resources

Total energy consumption in FY2024/25 was 1,298,000 GJ (FY2023/24: 1,342,600 GJ). Purchased electricity consumption was 61,200 MWh, of which 58% was supplied under a renewable power purchase agreement.

Water withdrawal was 365 megalitres and we generated 15,100 tonnes of waste.

Fuel switching from coal to natural gas and biomass at our Brandon tile plant contributed to lower Scope 1 emissions during the year.

Targets

We aim to reduce Scope 1 and 2 emissions by 50% by 2032 from the FY2019/20 baseline.

Health and safety

The lost-time injury frequency rate (LTIFR) was 1.12 per million hours worked in FY2024/25.
